Do I need a surge protector?

Households experience power surges or power fluxes on a daily basis whether it be caused from everyday household appliances kicking on/off or because of weather. Over time, these power surges can damage electronic devices.

ONTs and wireless routers are some of the first things to be affected. Plugging your ONT or router into a surge protector will help protect them. Having your electronics & appliances plugged into surge protectors could save you from having to replace them because of a little power surge.

If you are having problems connecting to the internet, unplug ONT and ROUTER from the power source for 20 seconds and wait up to 10 minutes for the system to reboot. If this doesn't fix the issue, make a note of the error message you are receiving, and which lights are on or blinking. This will be the information our tech support will need. You may reach them 24/7 at 368-5505, this is a free call.
